Joe,

From Down Under ...

In 2004 I made the following presentations:

January: to the Australian National Youth Science Forum, Annual Dinner (hosted by Canberra University) - motivational after dinner speaker "My life and Times in Science"

February: to the Committee for Melbourne: "The Australian Synchrotron - How it Works, and What it Does".

I have also given two graduate/ undergraduate level colloquia, November and December at The University of Melbourne:
"An Introduction to Particle Accelerators", and
"The Australian Synchrotron"

Include as you think fit.

Alan

Dear Joe,

I see you are collecting "outreach" items. I don't know if mine qualifies, but perhaps it does. I chaired a session at the annual AAPT Meeting in Sacramento this last summer. Each division of the APS will be asked to organize a session at the annual meeting. The first, this last year, was the DPB. We had a number of speakers (including Christine from AFRD) and I also spoke. The idea was to bring physics teachers material that they might use in their classes. (Our talks were all put on the web for their convenience.)

Andy

Sorry Sam. Didn't follow instructions, but now I'm sending this to Joe.

Christine Celata's activities:

1. On July 30 I was on a panel to talk about my work, my career, and the culture where I work. The audience was 400 high school students from all over the country who are interested in science and technology. The organization that ran the workshop is called the "National Youth Leadership Forum".
2. On October 25, 2004 I gave a 1.5-hour talk to the Berkeley "Friends of Science"-- a group of people from the area surrounding the Lab who come to hear about science going on here. My talk title was "An Alternative Energy Source-- Heavy-Ion-Driven Fusion".
3. On Dec. 7, 2004 I taught, as a guest lecturer, a 1.5-hour class on Heavy Ion Fusion to a U.C. Berkeley Nuclear Engineering class on inertial fusion.

The general sciences workplace committee is compiling a report on 2004 activities in education and public outreach, and work on career development and/or workforce development (especially toward underrepresented communities). Examples of relevant activities include speaking at local schools, judging science fairs, giving seminars at minority serving institutions, etc. If you have been involved in such activities, we would very much like to hear from you so that we can include them in the report. Your response can ensure that AFRD gets credit for your valued contribution. Please respond to Joe Kwan (jwkwan@lbl.gov) by January 24, 2005.

Joe, this may not count for your outreach report, but I did edit the HIF04 Proceedings. ...Ed

Hi!

I'm a physicist in AFRD and for more than a year I've been volunteering at the CSEE here at the lab. I'm supervising 5th-graders doing experiments when they visit LBNL. I'm probably doing something like 6 groups per school year.

I will also give a 30 to 40 minute presentation at the upcoming "daughters and sons to work" day.

Cheers

Ina

Joe: For last three years I have been working with QuarkNet, an outreach to high-school science teachers; Stu Loken is the prime coordinator of this activity. More specifically, Helmuth Spieler and I have been working directly with High School students in the Lodi area on Senior projects. It's been fascinating, and most rewarding. Could spend some time talking to you if you want about this activity.

Cheers,

Jose

Joe,

I have been Assisting in LBNL Center for Science & Engineering Education tours to visiting students (5th grade classes) from area schools. This includes leading small groups of students through hands-on laboratory activities appropriate to the grade level and linked to the schools science curriculum. I do this ~3 times / year. It's very enjoyable.
